

Get in the Game

Reduce, Reuse, Recycle

At Grocery Stores they ask **“Paper or Plastic?”**
Which is best?

Who said paper?

Paper is good because it biodegrades quickly
Paper bags are larger than plastic bags so you use fewer bags
BUT trees are destroyed to make paper bags!

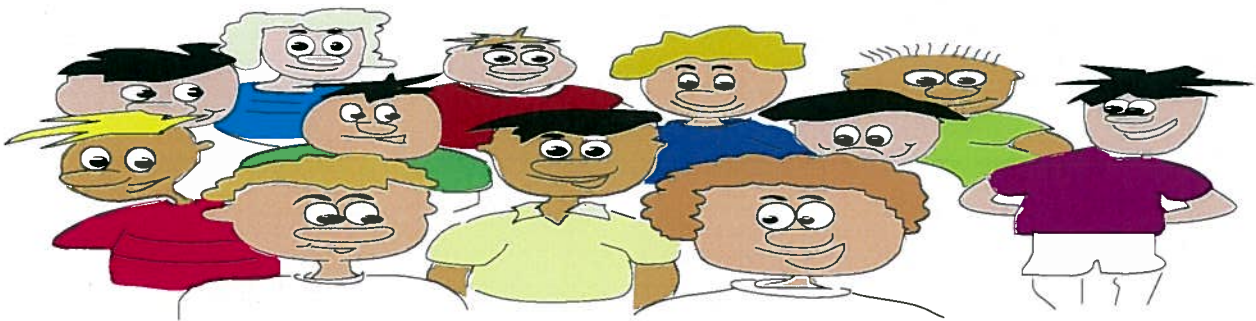

Who said plastic?

Plastic is good because moist items don't leak through the bag
And you can reuse them
But some plastics take 1,000 years to degrade!

Now what?

Use (& reuse) bags made from recycled P.E.T. beverage bottles
These bags are soft, durable, washable and outlast many other bags

Grocers and other stores sell them for about \$1.00

Resource Conservation ROCKS!
